Programming Assignment 4

Due on 2021-12-17, 23:59 IST

For this assignment, you have to write a complete Python program. Paste your code in the window below.

- You may define additional auxiliary functions as needed.
- In all cases you may assume that the input to your program has the expected format, so your program does not have to check for malformed inputs.
- There are some public test cases and some (hidden) private test cases.
- "Compile and run" will evaluate your submission against the public test cases.
- "Submit" will evaluate your submission against the hidden private test cases. There are 6 private test cases, with equal weightage. You will get feedback about which private test cases pass or fail, though you cannot see the actual test cases.
- Ignore warnings about "Presentation errors".

The library at the Hogwarts School of Witchcraft and Wizardry has computerized its book issuing process. The relevant information is provided as text from standard input in three parts: information about books, information about borrowers and information about checkouts. Each part has a specific line format, described below.

1. Information about books
Line format: Accession Number~Title
2. Information about borrowers
Line format: Username~Full Name
3. Information about checkouts
Line format: Accession Number~Username~Full Name~Checkout Date~Due Date

PDSP Quiz 4,
Thu 23 Dec
2021

PDSP
Assignment 5,
due Fri 31 Dec
2021

Line format: Username~Accession Number~Due Date

Note: Due Date is in YYYY-MM-DD format.

You may assume that the data is internally consistent. For every checkout, there is a corresponding username and accession number in the input data, and no book is simultaneously checked out by two people.

Each section of the input starts with a line containing a single keyword. The first section begins with a line containing Books. The second section begins with a line containing Borrowers. The third section begins with a line containing Checkouts. The end of the input is marked by a line containing EndOfInput.

Write a Python program to read the data as described above and print out details about books that have been checked out. Each line should describe to one currently issued book in the following format:

```
Due Date~Full Name~Accession Number~Title
```

Your output should be sorted in increasing order of due date. For books due on the same date, sort in increasing order of full name.

Here is a sample input and its corresponding output.

Sample Input

```
Books
APM-001~Advanced Potion-Making
GWG-001~Gadding With Ghouls
APM-002~Advanced Potion-Making
DMT-001~Defensive Magical Theory
