

1. Let X be a Normal Random variable with mean $\mu = 3$ and standard deviation $\sigma = 1$.
 - (a) Using the Normal tables provided in page 2 compute the $P(2.1 < X < 3.4)$
 - (b) Use the `pnorm` function in R to compute the $P(2.1 < X < 3.4)$
2. Let X be a Normal Random variable with mean $\mu = 3$ and standard deviation $\sigma = 4$. Using the `pnorm` command compute
 - (a) Compute $P(|X - \mu| < \sigma)$
 - (b) Compute $P(|X - \mu| < 2\sigma)$
 - (c) Compute $P(|X - \mu| < 3\sigma)$
3. Let X be a Normal Random variable with mean $\mu = 0$ and standard deviation $\sigma = 1$, $x = -2, -1.9, -1, 8, \dots, 1.9, 2$, $m = 100$, $p = 0.4$ and $Y \sim \text{Binomial}(m, p)$.
 - (a) Using inbuilt `pnorm` plot the distribution function $P(X \leq x)$.
 - (b) Let $Z = \frac{Y - mp}{\sqrt{mp(1-p)}}$, using inbuilt `pnorm` plot the distribution function $P(Z \leq x)$
4. Consider the Exponential (1) distribution.
 - (a) Generate 100 trials of 5, 50, 5000 samples respectively.
 - (b) In each case 5, 50, 5000, compute the sample mean for each of the 100 trials.
 - (c) Compute the average value and variance of the sample mean (over the 100 trials) for each case 5, 50, 5000.
 - (d) What do you observe about the average value and variance comparing each case ?

Normal Tables
 $\int_{-\infty}^x \frac{1}{\sqrt{2\pi}} \exp(-\frac{y^2}{2})$
